Protect your espresso-based coffee and steam equipment system from lime-scale buildup with the HRS-200 advanced hardness reduction system.

The HRS-200 utilizes a five-step process to remove scale-forming ions to ensure equipment is protected from lime scale buildup. The system also allows customers to specify the level of hardness reduction, optimizing both hot beverage quality and equipment performance while mitigating service issues and costs. It features a low-cost installation package that includes the filter and head, which allows for quick, easy, and sanitary cartridge changeouts.

For the best results, the HRS-200 system should be installed after an ultrafiltration system, which substantially reduces sediment, particulates, and tastes and odors.

FEATURES:

/// Optimizes beverage quality for espresso-based coffee and steam equipment.
/// De-carbonization technology removes scale-forming ions.
/// Blend setting for specifying the level of hardness reduction.
/// Reduces service issues and costs.
/// Can be installed and operated horizontally or vertically.
/// System includes cartridge, cartridge head, bracket, flush valve, carbonate hardness kit, and fittings to allow 1/2" ID hose, and/or 3/8" OD tubing.

/// Hardness Reduction System | HRS-200
