

You need filtered water to improve the quality of your beverage suite and protect your equipment.

However, innovative, premium water treatment solutions don't have to come stapled to bank-breaking costs.

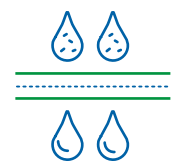

With Antunes VZN Ultrafiltration, you can ensure you leverage the highest-quality ingredient water without sacrificing your ability to minimize the price of operation.

VZN Ultrafiltration provides the following industry-leading benefits:

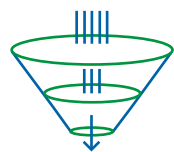

/// Self-Cleaning Technology

The VZN's multi-bore ultrafilter is built for durability, and optional TAC technology can help prevent buildup, providing even longer equipment lifespans.

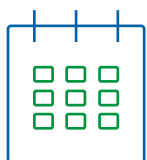

/// Superior Filtration

The VZN system provides 33x finer filtration than .5-micron filtration systems.

/// Maximizing Cartridge Life

The VZN system's mechanical ultrafilter is self-cleaning before taste and odor treatment, ensuring mechanically pure water enters the carbon cartridge and greatly expanding cartridge life.

/// Minimal Filter Changeout

With mechanical filtration and taste and odor reduction separated, carbon filters need only to be changed once annually.

/// Reduced Waste

Antunes' **VZN Water Filtration System** uses just one low-cost carbon cartridge per year compared to four filters with competitive units, reducing landfill waste.

Over a 3 year period, the **VZN** system saves on average **5 standard trailer truckloads from landfills**.

The VZN system provides a lower total cost of ownership, leaning on these long-term benefits to boost ROI compared to traditional options.

It also gives operators the smallest footprint of any ultrafiltration system in foodservice and is configurable for any unique application.

With VZN, you get the industry's best at a fraction of the cost.
